RCT

The dental record that sees and listens.

Patient records, follow-ups, reminders, lab orders and billing for small dental clinics. Dentyaan Cam, our intraoral camera, and Dentyaan Pod, our voice-note mic, send what they see and hear straight into the record. On any phone, in English, हिंदी and తెలుగు.

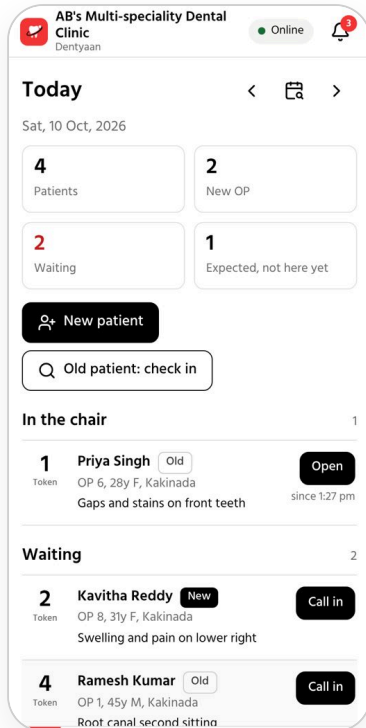

Built with **Dr. Mallika Adapa, Dental Surgeon** BDS, FIE (Endodontics), MHA

For dental clinics with one to five doctors

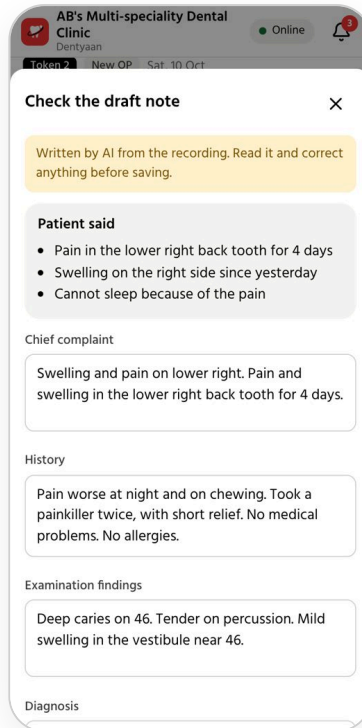

One visit, start to finish

From the front desk to the chair to the patient's own phone, every step goes into one record. The next pages follow one visit at AB's Multi-speciality Dental Clinic.

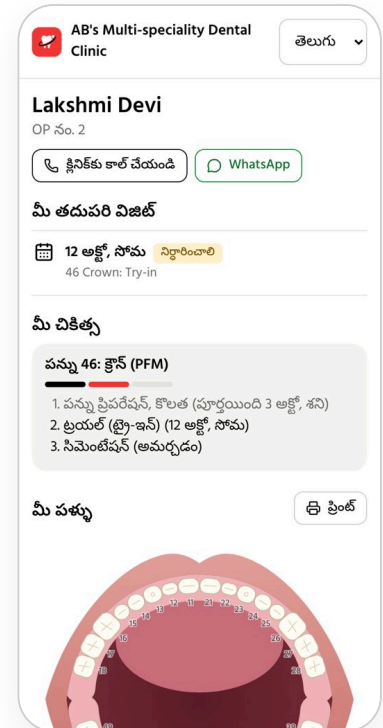

Front desk

Today's patients in token order, who is waiting and who is in the chair.

In the chair

The doctor talks to the patient, and the case note is drafted for the doctor to check.

Patient's phone

Their teeth, treatment and next visit, in their own language.

Fewer half-done treatments

Every treatment that needs more than one sitting books the next one by itself, and missed visits come back on the morning call list.

Lab work that does not get lost

Every lab, scan and pharmacy order has a status. Partners update it from a link, without an app.

Any history in seconds

Visits, teeth, photos, prescriptions and bills in one place, found by name, phone or OP number.

Money you can see

Billed, collected and still due, by day and by doctor, with cash and UPI together.

A record with eyes and ears

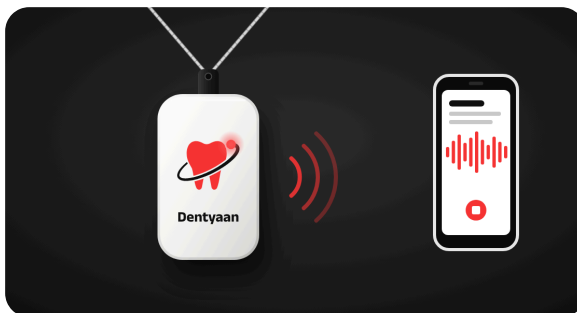

Most clinic software is a form on a screen. Dentyaan comes with its own camera and its own voice pod, and both put what they see and hear straight into the patient's record.

Dentyaan Cam. What the dentist sees goes into the record.

A slim intraoral camera that plugs into the clinic phone. The patient sees the cavity, the crack or the worn filling on the screen in seconds, so treatment is understood and accepted.

Every photo is tagged to the tooth and marked before, during or after, and earlier photos sit beside today's.

Dentyaan Pod. What the dentist says writes the record.

Wear it or set it on the table. Talk to the patient in Telugu, Hindi or English, and the case note drafts itself for the doctor to check. Hands stay on the patient.

Recording starts only when the doctor starts it, with the patient's agreement. The audio is deleted once the note is saved, unless the clinic chooses to keep it.

Both devices are optional: the phone's own camera and mic work with the same record. Rent them on the Plus plan, or buy them. Plans are on page 12. Ask us for pricing.

The patient arrives

The assistant registers a new patient in under a minute, or checks in an old one by name or phone. Everyone gets a token, and the doctor sees the queue on their own phone.

New patient

Name, phone, age, village and the reason for the visit. Language is set here, so messages go out in it.

The queue

Waiting, in the chair, done. The last visit shows under each name before the patient sits down.

Register book

The same columns as the paper register, with a download as Excel for the accountant.

Old patients, old records

Type what was done earlier straight from the register, so the history is complete from day one.

Alerts that matter

Diabetes, blood thinners, allergies and pregnancy show in red at the top of every screen.

Booking link for patients

Patients ask for a time from a link on your WhatsApp or poster. The front desk confirms with one tap.

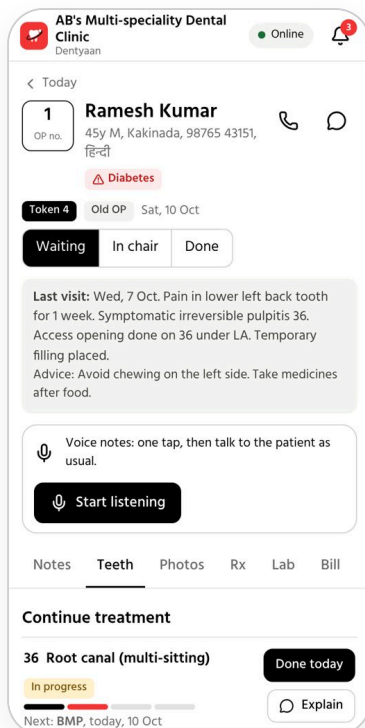

Consent, once

Audio recording, reminders and dental AI research are each asked once, yes or no, and remembered.

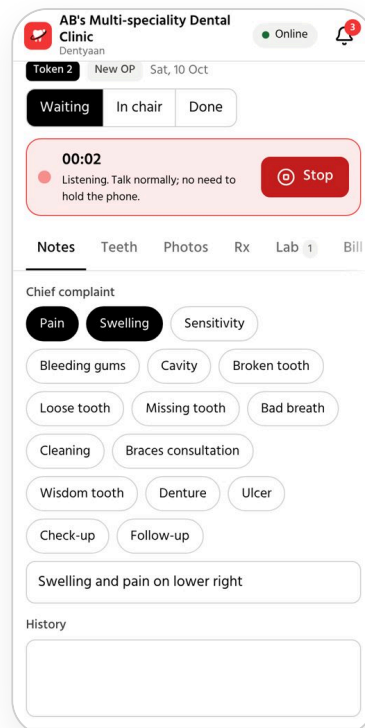

In the chair

The doctor taps the teeth, talks to the patient as usual, and the note, the findings and the medicines land in the record. Nobody types during the visit.

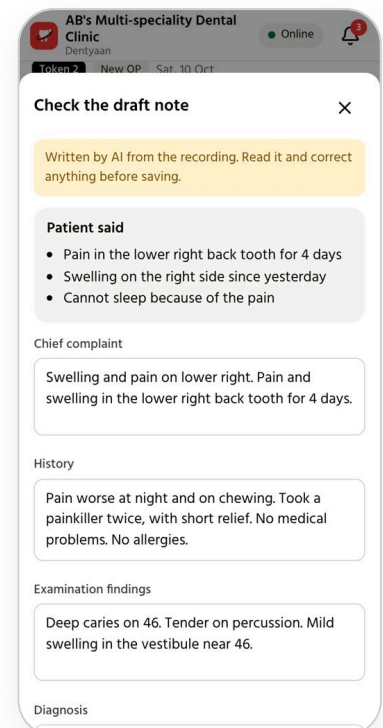

Tooth chart

Tap a tooth to mark a finding or start a treatment. Baby, mixed or adult teeth, chosen by the patient's age. FDI numbers.

Listening

One tap on the phone or the Dentyaan Pod. The doctor and patient talk in Telugu, Hindi or English.

The draft note

Complaint, history, findings, diagnosis, procedure, advice and medicines. The doctor corrects and saves. Teeth mentioned are marked on the chart.

Treatment plans with steps

A root canal knows its sittings. Mark one done, and the next is booked by itself.

Register-style shorthand

Doctors who write "36 RCT, 46 EXT" can type it exactly that way; Dentyaan reads it.

Photos tagged to the tooth

Phone camera or Dentyaan Cam, marked before, during or after, with earlier photos beside today's (page 3).

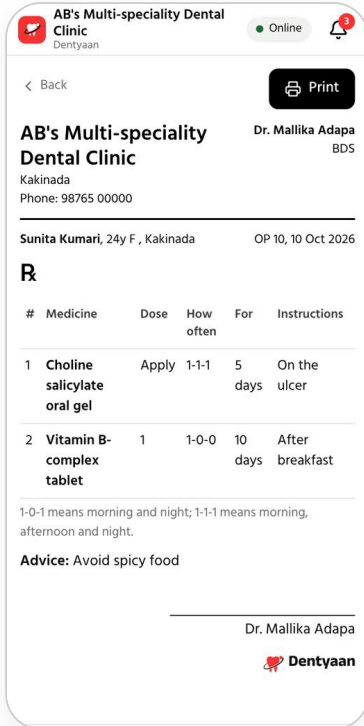

Explain to the patient

A short explanation of the treatment in the patient's language, ready to read out or send.

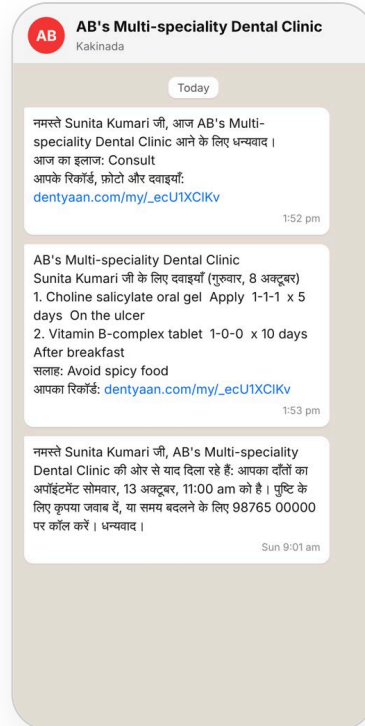

What the patient takes home

A printed prescription on your letterhead, the same on WhatsApp in their language, and a link to their own dental record. Patients remember the clinic that sent them this.

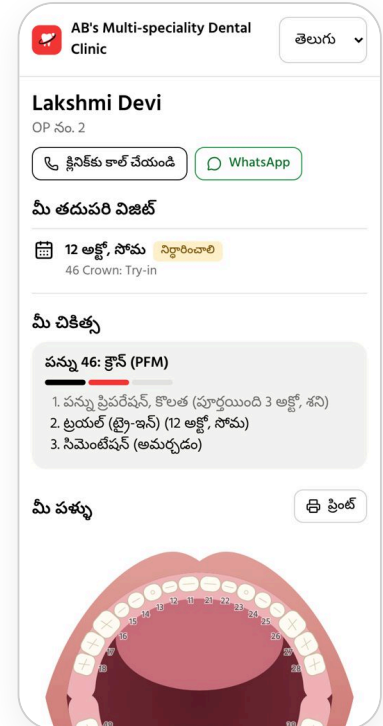

Prescription

On the clinic letterhead, with the doctor's name, qualification and registration number. Print it or send it.

On WhatsApp

The visit summary, the medicines and the next visit reminder, in the patient's language.

Their own record

Opens with the last four digits of their phone number. Teeth, treatment, photos and next visit.

In their language

Each patient is marked English, Hindi or Telugu once. Every message to them follows.

Pharmacy, if they want

A prescription can go straight to a nearby pharmacy from the network, for pickup or delivery.

A real letterhead

Clinic name, address, phone, registration number and logo, set up once in Settings.

Nothing to install

The patient needs no app. The record opens in the browser on any phone.

Nobody slips through

Before the patient leaves, the next sitting is booked. Every morning the assistant sees exactly who to call, and why, and marks what they said.

Next visit, before they leave

After 3 days, 1 week, 2 weeks: one tap books it, with the reason filled in.

The morning call list

Lab work ready, tomorrow's patients, missed visits and overdue check-ups, each with Call and WhatsApp.

Appointments

Two weeks at a glance: booked, confirmed or still to confirm.

Reminders written for you

The message is ready in the patient's language. Tap WhatsApp, and it is sent from the clinic's phone.

Missed visits come back

A patient who did not turn up is on tomorrow's list, with the treatment that is still open.

Six-month recalls

Patients not seen for six months come up on the list by themselves.

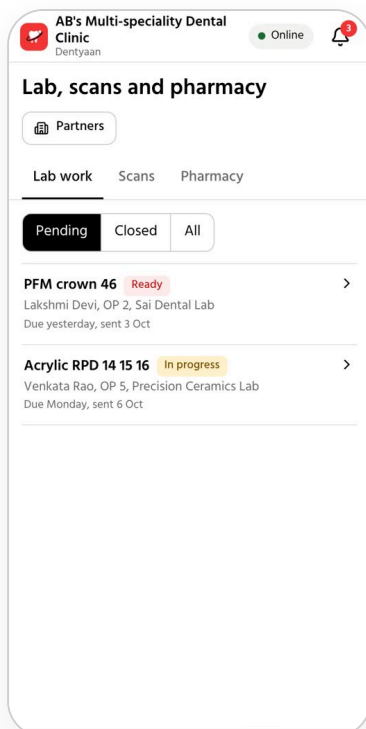

Reviews on Google

After treatment, every patient gets the same short request with your Google review link, if you turn it on.

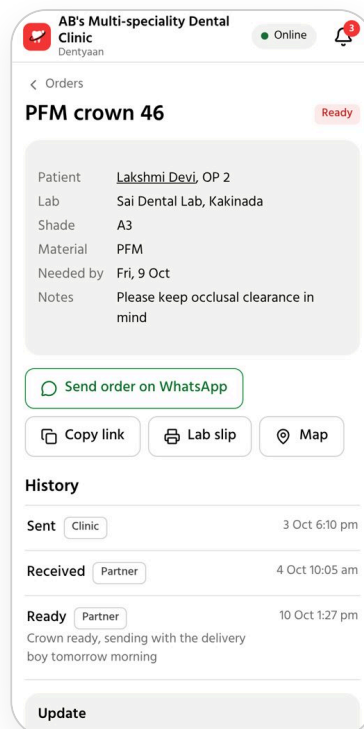

Labs, scan centres and pharmacies

Lab orders, scan referrals and pharmacy orders leave the clinic with one tap and come back with a status. The lab needs no app: it updates from a link on WhatsApp.

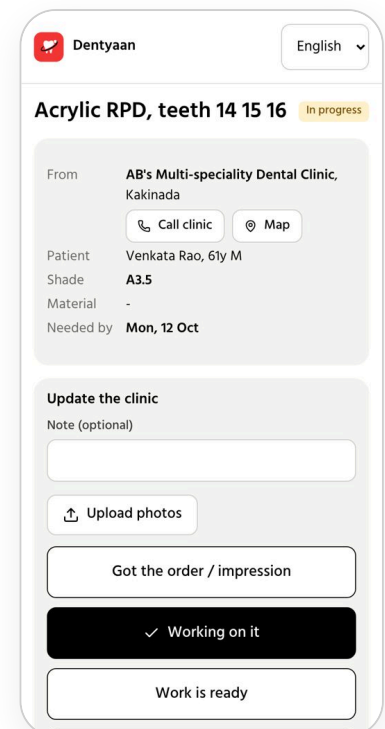

Orders

Pending, ready, overdue. Crowns, dentures, scans and prescriptions in one list.

One order

Sent, received, ready, delivered: who did what and when, and the lab's own notes.

The lab's view

The lab opens a link, sees the order, and taps "Working on it" or "Work is ready". The clinic is told.

A slip with a QR code

Print the lab slip with the order. The lab scans it to update the status.

Fitting booked when work is back

"Lab work ready: book the fitting" appears on the call list the same day.

The labs you already use

Add your own lab, scan centre and pharmacy, or pick verified ones nearby.

Lab bills in one place

Lab bills go into Expenses, so each month shows what came in next to what went out.

Money and stock

The bill is made from the treatment, not typed again. Payments in cash, UPI or card go against it, and dues are visible every day instead of at month end.

Stock

Materials used in a visit are taken out automatically. Items running low come up in red.

UPI with your QR

A QR code for your clinic's UPI ID prints on every unpaid bill, and the receipt goes on WhatsApp with one tap.

Estimates before treatment

A printed estimate for a crown or a denture, so the patient decides with the numbers in hand.

Dues in one list

Every patient with a balance, how much and since when, with a Call button next to each.

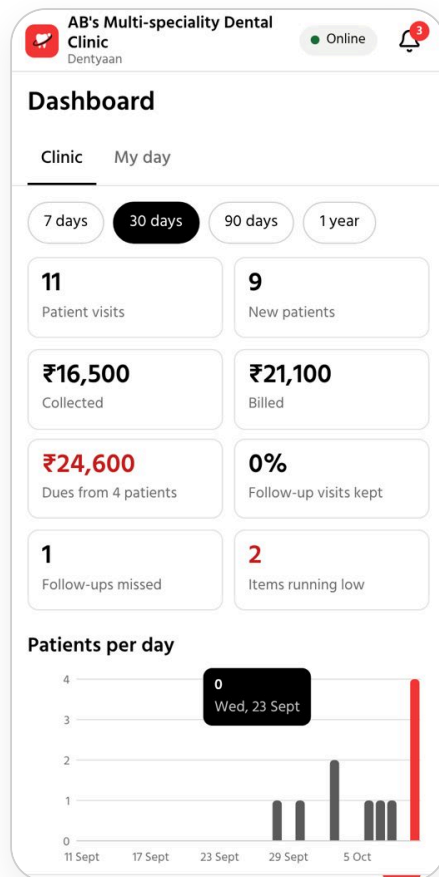

Expenses too

Rent, lab bills, salaries and materials, so the owner sees each month what came in and what went out.

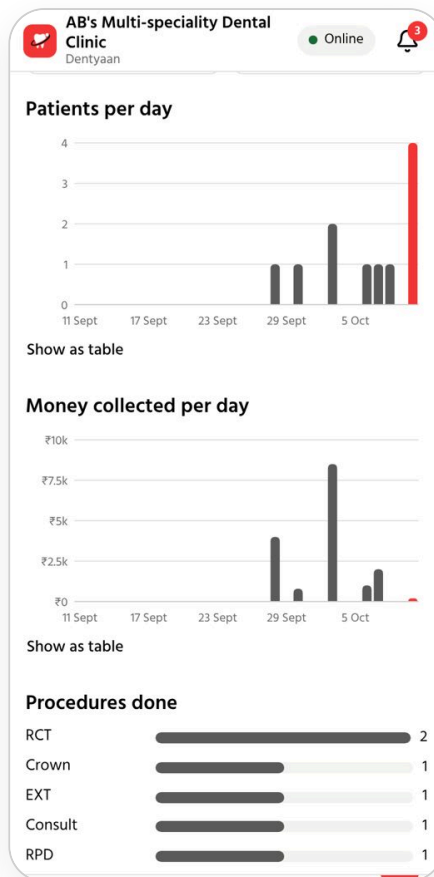

Your clinic in numbers

Patients seen, new patients, collected, billed, dues, follow-ups kept and items running low, for 7 days, 30 days, 90 days or a year. Each doctor sees their own day too.

Dashboard

The numbers an owner checks, for any period.

running low

By doctor

Each doctor sees their own patients and day. The owner sees the whole clinic and the money.

More than one clinic

A doctor who visits several clinics uses one login. Each clinic's patients stay separate.

Download as Excel

The register book for any dates, for your accountant.

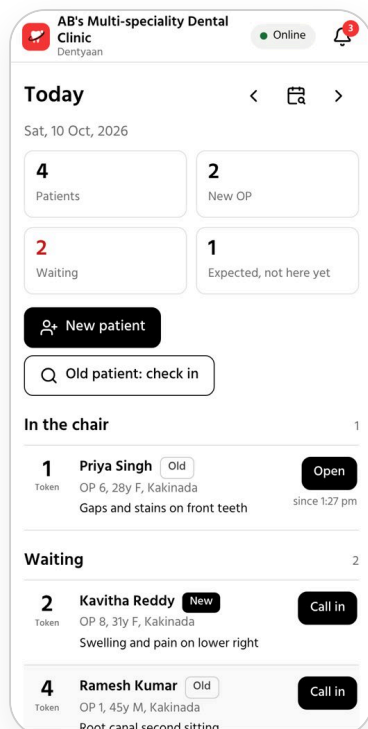

Audit log

Every important change records who made it and when.

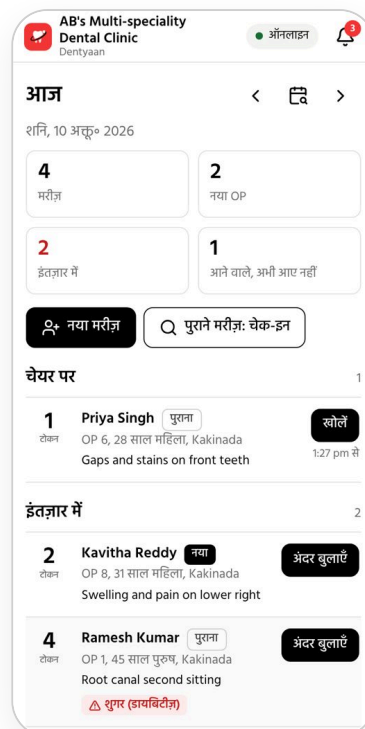

The same screen, in three languages

Each phone shows Dentyaan in English, Hindi or Telugu, chosen by the person holding it. An assistant can work in Telugu while the doctor works in English, on the same record.

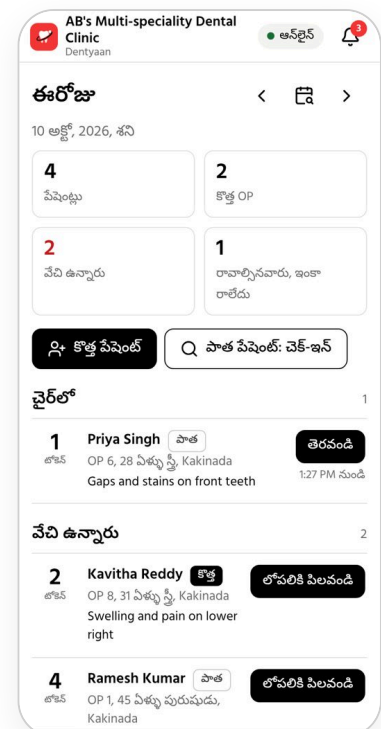

English

Chosen per phone, in Settings. Nothing else changes.

हिंदी

The same Today screen for a Hindi-speaking front desk.

తెలుగు

And in Telugu, with the patient's own messages to match.

Easy to start

Use it in Chrome or Safari on any phone or computer, or install the Dentyaan app for Windows or Android from dentyaan.com.

Kept in India, kept private

Patient data is stored in Google Cloud in Mumbai, with photos and X-rays in private storage, never on an open link.

A login for everyone

Assistants register, take photos, bill and remind. Doctors also write notes and prescriptions. Owners also see the money and settings.

Your data stays yours

Download the register as Excel, and a patient's full record as a standard FHIR file if they move to another clinic.

Three ways to start

Every clinic is different. Tell us about yours, and we will send you a price that fits it.

STARTER

The whole record, on the phones you already have.

The whole record, every feature
All your doctors and assistants
Phone camera and phone mic
Setup and help on WhatsApp

PLUS, WITH THE DEVICES

Everything, with our camera and mic in your clinic.

Everything in Starter
Dentyaan Cam and Dentyaan Pod on rent
Six months minimum

OR BUY THE DEVICES, AND STAY ON STARTER

Dentyaan Cam and Dentyaan Pod, yours to keep.

Priced close to what they cost us to make, on purpose. Buy one or both.

Ask for pricing: dentyaan.com/pilot, WhatsApp +91 79765 46258, or info@dentyaan.com.

Every plan includes

Patient register, tokens and the day's queue
Voice notes in Telugu, Hindi and English

Follow-ups that book themselves
Billing, UPI, dues and stock
English, Hindi and Telugu screens
Data kept in India, backed up every night

Tooth chart, treatment plans and notes
Prescriptions on your letterhead and WhatsApp

Lab, scan centre and pharmacy orders
The patient's record on their own phone
Works when the internet drops
Setup of your clinic, and help on WhatsApp

On the web, on Windows and on Android

Use Dentyaan in Chrome or Safari on any phone or computer, or install the Dentyaan app for Windows or Android. Every device shows the same record.

In the browser

Chrome or Safari on any phone, tablet or computer. Open dentyaan.com and sign in.

Windows app

For the front desk or the computer in the surgery.

Android app

For the doctor's and the assistants' phones.

GET THE APP

Windows

dentyaan.com/download/windows

Android

dentyaan.com/download/android

The apps update themselves. Sign in with the same login you use on the web.

One press, one photo

In the Windows and Android apps, the button on the Dentyaan Cam takes the photo, and it goes straight into the patient's record.

Works offline

Keep working when the internet drops. Changes are sent as soon as you are back online.

One login, several clinics

A doctor who works in more than one clinic signs in once. Each clinic's patients stay separate.

Always up to date

The apps update on their own. There is nothing to download again.

Dentyaan Cam at a school dental camp in Pilani

Dainik Bhaskar, Chirawa edition, 14 October 2026. A two-day dental health and oral hygiene camp for the junior school children of Birla Shishu Vihar, Pilani, held with Kalpvriksh Hospital and Research Centre Foundation. Dr. Mallika Adapa and Dr. Ekta Sharma checked the children's teeth and showed them how to brush, how cavities and gum problems start, and why regular check-ups matter.

The report in Dainik Bhaskar, Chirawa edition, 14 October 2026: कल्पवृक्ष अस्पताल में दंत स्वास्थ्य जागरूकता शिविर

Dr. Mallika Adapa checks a child's teeth with the Dentyaan Cam, the laptop beside her. Photo: Dr. Mallika Adapa and team

WITH THE DENTYAAN CAM

Dr. Mallika screened the children with the Dentyaan Cam on a laptop. Each child saw their own teeth on the screen, so a cavity was something they could see, not just a word.

Read more, with the full report, at dentyaan.com/news

The people behind Dentyaan

A dental surgeon, a storyteller and an engineer, building Dentyaan with the dentists who use it.

Dr. Mallika Adapa

Co-founder & Chief Medical Officer

Dental Surgeon BDS, FIE (Endodontics), MHA

A dental surgeon and the founder of AB's Multi-speciality Dental Clinic, with earlier work at Apollo Hospitals. She leads the clinical side of Dentyaan.

Venkat Talari

Co-founder & Chief Marketing Officer

B.Tech (CSE), DFT

An engineer turned storyteller, with years of experience in content and communication. He leads Dentyaan's brand, marketing and outreach to clinics.

Anil Kumar

Co-founder & Chief Technology Officer

B.E. (Hons) EE, MBA (Finance & Strategy)

An engineer from BITS Pilani, with earlier years at Samsung R&D and AMD. He leads the product and the team that builds Dentyaan.

WHAT WE BELIEVE

Built with dentists, for their real day.

Patient data stays the patient's, and stays in India.

Simple enough to start on day one.

Priced for small clinics.

Dentyaan

Getting started

1

Your clinic is set up

Clinic name, letterhead, UPI ID, procedures, prices and the labs you already use. Choose Starter or Plus (page 12); the Cam and Pod arrive by courier.

2

Add your team

Each doctor and assistant gets their own login and picks their own password.

3

Put it on the clinic's phones

Open the link and add it to the home screen, or install the Windows or Android app from dentyaan.com.

4

Start with today's patients

Old patients go in as they come back, with their old treatments typed from the register.

Starting with clinics in Andhra Pradesh, Telangana, Rajasthan and Delhi.

Join the pilot

Scan the code, or open

dentyaan.com/pilot

Tell us about your clinic, and we will call you to set it up.
